GitHub: https://github.com/spoorthikengol | LinkedIn: https://linkedin.com/in/spoorthi-k-p-1017aa3a2

PROFESSIONAL SUMMARY

Second-year engineering student at JNN College of Engineering (JNNCE) with programming knowledge in Python, C and C++, and database knowledge in SQL, MySQL and MongoDB. Contributed to software and AI-focused projects, including a healthcare report-analysis application and hackathon projects in video anomaly detection and medical imaging. Seeking internships in software development, AI/ML and computer vision.

TECHNICAL SKILLS

Programming Languages: Python, C, C++
Databases and Query Languages: SQL, MySQL, MongoDB

PROJECTS

MediMind AI — AI-Powered Healthcare Assistant | GitHub Repository: https://github.com/spoorthikengol/MediMind-AI

- Built a personal healthcare project, using AI-assisted coding, that analyzes uploaded medical-report PDFs and simplifies complex medical terminology.
- Implemented and integrated health-score calculation, disease-risk prediction, report history and AI-generated health insights.
- Integrated backend, database and web frontend components and deployed the application.
- Designed as an informational tool to help users understand reports; it does not provide medical diagnosis or replace a qualified medical professional.

SafetyNet AI — Privacy-First Video Anomaly Detection | Team Repository: https://github.com/shsumukha381-ui/NEURALNETWROKS

- Contributed to a team hackathon project (repository hosted on a teammate's GitHub account) that detects unusual activity without analyzing raw video pixels.
- Worked with teammates on human-pose-based activity analysis and anomaly-risk scoring with Normal, Suspicious and Critical levels.
- Supported the project's privacy-conscious design, which analyzes skeletal movement rather than identifiable video content.

MRI Enhancement & Segmentation | GitHub Repository: https://github.com/spoorthikengol/AI-Medical-imaging

- Participated in a hackathon team project to develop an MRI enhancement and segmentation workflow that improves scan clarity and isolates structures of interest.
- Applied image-processing and computer-vision techniques to scan enhancement and segmentation.

EXPERIENCE

Future Interns — Full Stack Web Development Intern Aug 2026 – Sep 2026

- Used AI-assisted coding to build and refine a production-style portfolio website, reviewing and modifying the generated code.
- Implemented responsive interfaces and project case-study pages.
- Added contact functionality and SEO improvements, and set up deployment workflows.

EDUCATION

JNN College of Engineering (JNNCE) — Second-Year Engineering Student CGPA: 9.38

CERTIFICATIONS

- MongoDB Basics for Students — MongoDB, 2026
- Building AI-Powered Search with MongoDB Vector Search — MongoDB, 2026
- SafetyNet AI (Hackathon) — Dayananda Sagar Academy of Technology and Management, 2026
- MRI Enhancement & Segmentation (Hackathon) — JNNCE, 2026
