

SPOORTHY K P

AI & Software Developer | Computer Vision | Full-Stack

Shimoga | GitHub: github.com/spoorthikengol | LinkedIn: linkedin.com/in/spoorthi-k-p-1017aa3a2

PROFESSIONAL SUMMARY

Second-year engineering student and AI & software developer building practical products across full-stack development, computer vision, and applied AI. Experienced with Python, FastAPI, React, TypeScript, PostgreSQL, and machine-learning workflows. Built MediMind AI, a healthcare assistant for medical-report understanding, along with computer-vision and hackathon projects.

TECHNICAL SKILLS

Languages:	Python, C++, TypeScript, JavaScript, SQL
Frontend:	React, TypeScript, Vite, Tailwind CSS, Framer Motion
Backend:	FastAPI, Flask, REST APIs, SQLAlchemy
Databases:	PostgreSQL, MongoDB
AI / ML:	Computer Vision, MediaPipe, OpenCV, PyTorch, ResNet, Grad-CAM, U-Net, Hugging Face
Tools / Platforms:	Git, GitHub, Vercel, Render, VS Code

PROJECTS

MediMind AI — AI-Powered Healthcare Assistant | Python, FastAPI, React, TypeScript, PostgreSQL, AI/ML

- Built an AI-powered healthcare platform that analyzes uploaded medical-report PDFs and simplifies complex medical terminology.
- Implemented health-score calculation, disease-risk prediction, personalized insights, report history and an AI health assistant.
- Developed a FastAPI backend with PostgreSQL and a React + TypeScript frontend and deployed the application on Render.
- Designed the system to help users understand medical reports while maintaining boundaries around medical diagnosis and professional care.

SafetyNet AI — Privacy-First Video Anomaly Detection | Python, PyTorch, MediaPipe, OpenCV, Gradio

- Built during a hackathon to detect unusual activity from human skeletal movement rather than directly analyzing raw video pixels.
- Used MediaPipe pose extraction, kinematic feature engineering and a BiLSTM + attention temporal model for anomaly-risk scoring.
- Implemented School and Shop modes with Normal, Suspicious and Critical risk levels.
- Added optical-flow fallback for difficult tracking conditions and SHA-256 hashing for anomaly evidence.

MRI Enhancement & Segmentation | Python, Computer Vision, Image Processing

- Developed a medical-imaging workflow for MRI enhancement and segmentation to improve scan clarity and isolate structures of interest.
- Applied image-processing and computer-vision techniques in a hands-on hackathon project.

EXPERIENCE

Future Interns — Full Stack Web Development Intern

Aug 2026 – Sep 2026

- Built and refined a production-style portfolio using React, TypeScript, Vite, Tailwind CSS and Framer Motion.
- Implemented responsive UI, project case studies, contact functionality, SEO metadata and deployment workflows.

EDUCATION

JNN College of Engineering (JNNCE) — Second-Year Engineering Student

CGPA: 9.38

VTU curriculum with focus on software development, AI/ML and computer vision.

CERTIFICATIONS

- SafetyNet AI — Dayananda Sagar Academy of Technology and Management, 2026
- MRI Enhancement & Segmentation — JNNCE, 2026
- MongoDB Basics for Students — MongoDB, 2026
- Building AI-Powered Search with MongoDB Vector Search — MongoDB, 2026
