

SPOORTHI K P

JNN College of Engineering (JNNCE) | Software / AI & ML / Full Stack Development

8618687296 | spoorthikengol27@gmail.com | linkedin.com/in/spoorthi-k-p-1017aa3a2 | github.com/spoorthikengol

SUMMARY

Engineering student focused on AI/ML, computer vision and full-stack development. Hands-on experience building AI-powered applications and hackathon prototypes using Python, React, FastAPI, PostgreSQL and machine learning. Interested in software engineering, AI/ML and product-focused development opportunities.

EDUCATION

JNN College of Engineering (JNNCE) — Bachelor of Engineering | CGPA: 9.38 | Expected 2029

EXPERIENCE

Future Interns — Full Stack Web Development Intern

- Selected for a structured full-stack development internship focused on practical tasks, project development and industry-oriented web development skills.

PROJECTS

MediMind AI — AI-Powered Healthcare Assistant

Python, FastAPI, React, TypeScript, PostgreSQL, SQLAlchemy, Hugging Face

- Built an AI-powered healthcare application for medical report analysis, health scoring, risk assessment and simplified health insights.
- Implemented a FastAPI backend with report-analysis and AI-chat functionality and integrated a PostgreSQL data layer.
- Designed a responsive React dashboard covering report history, analytics and user-facing health insights.

SafetyNet AI — Privacy-First Video Anomaly Detection | Hackathon Team Project

Computer Vision, Machine Learning, Human Pose & Movement Analysis

- Worked with a hackathon team to prototype an ML-based safety system for detecting unusual activities such as fights and theft-related events in video.
- Applied computer-vision and temporal movement analysis concepts to turn a real-world physical-security problem into an ML solution under time constraints.
- Gained practical experience in rapid prototyping, debugging, teamwork and making pragmatic technical decisions during a hackathon.

MRI Enhancement & Segmentation

Python, Deep Learning, Computer Vision, Image Segmentation

- Developed a medical-imaging project focused on MRI image enhancement and segmentation.
- Explored deep-learning workflows for improving medical image quality and extracting meaningful regions for downstream analysis.

TECHNICAL SKILLS

Languages	C, C++, Python, JavaScript, TypeScript
Frontend	React, Vite, HTML, CSS, Tailwind CSS
Backend	FastAPI, Flask, REST APIs
Databases	PostgreSQL, SQLAlchemy
AI / ML	Machine Learning, Computer Vision, Medical Imaging, Human Pose & Movement Analysis
Tools	Git, GitHub, Vercel, Hugging Face

HACKATHON & DEVELOPMENT

Hackathon experience in AI for medical imaging and safety-focused computer vision. Comfortable collaborating in teams, prototyping under deadlines and explaining technical decisions.
